

The Andhra Petrochemicals Limited

Date: 31/08/2011

TO WHOM SO EVER IT MAY CONCERN

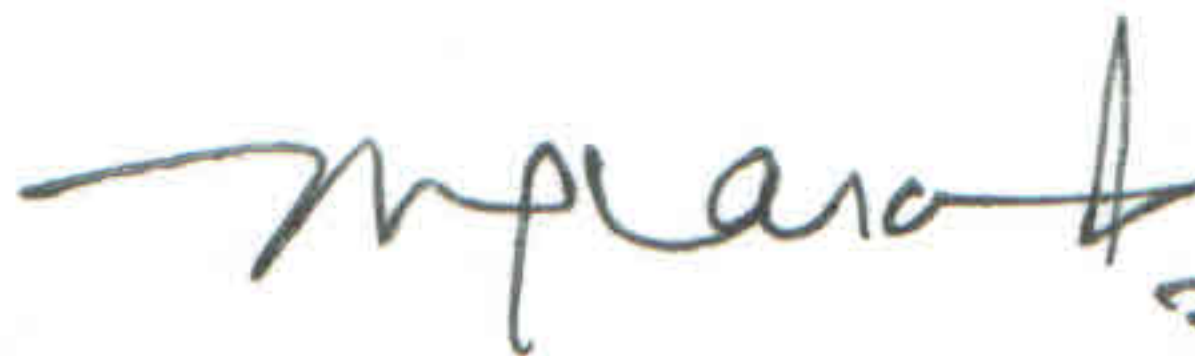

We have procured a Continuous Ambient Air Quality Monitoring Station from M/s OPSIS AB, Sweden through their Indian distributor M/s Nevco Engineers Pvt. Ltd. in April 2009. The system continuously measures SO₂, NO₂, O₃, Benzene and PM₁₀. This is installed and commissioned by M/s Nevco Engineers Pvt. Ltd.. The real time data for all parameters is being displayed in Scrolling Public Display Board. Hourly average data is being sent to APPCB server. The light path has 330 meters length and average reading over this path length are being displayed and logged.

The above system is working very well ever since installed without any maintenance and 100% data capture time is being achieved. In 28 months of operation we have changed the lamp once.

No other spares changed so far.

We are happy with the system, its installation and working and so far there has been no requirement of spares. The services being provided by Nevco are also very satisfactory.

For The Andhra Petrochemicals Limited.
